

KYLE BLOXAM

NETWORK · TECHNICAL SUPPORT · SALES

Krugersdorp, Gauteng, South Africa (GMT+2)

+27 XX XXX XXXX

xeroone000@gmail.com

PROFILE

Technical support specialist and network administrator responsible for approximately 4,000 networked devices across 24 sites in three provinces, sustained at 98%+ availability against a contractual SLA. Diagnoses hardware and connectivity faults end to end — device, cabling, power, switching or configuration — then explains the fix, to site staff and client directors alike, with patience and in language they can act on. Backed by frontline sales experience in retail and high-volume outbound telephonic sales, and confident, fluent English on the phone and in writing. Works with AI daily, both for operational reporting and automation at work and as a self-taught developer building games, audio software and internal tooling.

CORE COMPETENCIES

NETWORKING MikroTik routers and routing, managed switching, VLAN segmentation, static IP addressing and subnetting, PoE budgeting and power-fault diagnosis, port forwarding, point-to-point wireless links, multi-site network build-out and expansion.

HARDWARE Hikvision IP camera systems (certified), HikCentral VMS administration, recording servers, access control and multifactor controllers, structured cabling, UPS and power backup.

SERVICE DELIVERY Freshdesk ticketing, technician dispatch and team coordination, SLA severity matrices and escalation paths, 24/7 standby cover, root-cause diagnosis, third-party vendor escalation, new-site installation and handover.

CUSTOMER & SALES Outbound telephonic sales and objection handling, technical consulting for stakeholders at every level from site staff to directors, phone / email / chat support, solution scoping and recommendation, concurrent multi-account handling under time pressure.

AI & AUTOMATION Daily AI-assisted fault diagnosis, reporting and workflow automation; Python scripting; built and deployed an internal AI chatbot agent; independent software and game development.

PROFESSIONAL EXPERIENCE

ARCHETOR Centurion, Gauteng
CCTV Administrator

2023 – Present

- Administer approximately 4,000 IP cameras and the supporting access-control infrastructure across 24 residential estates in Gauteng, KwaZulu-Natal and the Western Cape, sustaining 98%+ device availability.
- Maintain and expand independent site networks — each estate runs its own server room, MikroTik routing, managed switching and multiple VLANs segmenting CCTV from access control, with static addressing, PoE-powered endpoints and point-to-point wireless links between buildings.
- Coordinate field technicians and technical teams off the ticket queue — dispatching and prioritising fault response alongside routine day-to-day CCTV and access-control maintenance across the full portfolio.
- Coordinate new installations as each estate's construction phases are completed and handed over, taking sites from build through commissioning to live monitoring; currently delivering two new estates alongside the running portfolio.
- Own service delivery against a contractual SLA, including a severity matrix requiring 1-2 hour response and 24/7 standby cover on critical faults; carry standby duty two weeks in every month and regularly assist during off weeks.
- Diagnose faults end to end, isolating whether a failure sits in the device, cabling, PoE budget, switch, wireless path, power or configuration — across cameras, recording servers, electric fencing and access-control lanes.

- Act as technical point of contact for estate managers, client site managers and security personnel — handling concurrent faults across multiple sites by ticket, phone, email and messaging, and administering HikCentral user profiles and permissions for client stakeholders.
- Report directly to senior client leadership — general managers and directors at the client group — on service performance, recurring faults and remediation, translating technical detail into the commercial terms decision-makers need.
- Operate a contractor access-control and clock-in system across client construction sites, working directly with Health & Safety personnel to maintain accurate site attendance records.
- Escalated recurring third-party multifactor controller failures by building a documented fault log and a formal written escalation, converting an anecdotal complaint into an evidence-based case against the vendor.
- Automate internal reporting and fault tracking using Python and AI tooling.

NOVA LIFE Gauteng

2022 – 2023

Outbound Sales Consultant

- Worked approximately 200 outbound calls per day against allocated lead lists in a high-volume telephonic sales environment.
- Ran the full telephonic sales cycle — qualifying prospects, presenting the product, handling objections and closing — building the objection-handling technique and phone confidence that now underpin day-to-day client-facing technical work.

DYNAMIC DISTRIBUTORS Gauteng

2015 – 2021

Production Supervisor

- Supervised a team of 9–12 across the production, assembly and packaging of PVC electrical supplies, accountable for daily output targets and quality control; role ended through retrenchment after a six-year tenure when the department was outsourced.

LOOK & LISTEN Gauteng

2013 – 2014

Retail Sales Assistant (part-time) — floor sales and customer support in a specialist retail environment.

TECHNICAL PROJECTS & AI

- **AI IN PRACTICE** Uses AI tooling every day for fault diagnosis, report generation and automating repetitive administrative work; comfortable directing AI to build working solutions, not just to answer questions.
- **INTERNAL AI AGENT** Built a company chatbot / agent on the open-source Odysseus framework.
- **GAME DEVELOPMENT** Three years building a multiplayer game in Godot single-handedly, including all artwork, with the intention of releasing it commercially.
- **AUDIO SOFTWARE** Guitar amplifier simulations and audio plugins, built and refined for personal use with a view to release.
- **DEVELOPER TOOLING** Browser-based tools for processing images and game assets; Python automation for operational reporting.

EDUCATION & CERTIFICATIONS

- Hikvision Certified Training
- PSIRA Registered — Grades E, D and C
- National Senior Certificate (Matric)
- Continuously self-taught in networking and software development; intending to formalise this with Computer Science studies.

REMOTE WORK READINESS

- Available to work a fixed 09:00–17:00 GMT-8 shift (19:00–03:00 South African time).
- Dedicated, quiet home office on high-speed fibre with capacity to upgrade, and UPS backup protecting against local power interruptions.
- Already accustomed to after-hours operation through two weeks of standby duty every month.
